### Unprecedented Performance in a Pocket-Sized Package

Tableau's Pocket Family of forensic bridges (a.k.a. "write-blockers") offer substantial capability in a pocket sized, easy to pack and carry profile. Designed as a space saving tool for acquiring IDE and SATA subject disks, the T14, T14-RW, T15, and T15-RW bridges provide features exceeding most of our competitor's traditionally sized products. Pocket Family products are available as standalone bridges or bundled with cables and power supplies in a convenient forensic kit.

### MINIMIZE CLUTTER IN YOUR FORENSIC KIT BAG

Tableau's product engineering experience spans decades of innovation. Our engineers have developed the Pocket Family to perform superbly in either a field or lab setting. These products are optimized for direct connection to either IDE or SATA devices, eliminating the need for carrying additional device connection cables.

Simple to use yet powerful, the Tableau Pocket Family of bridges will improve the efficiency of your disk acquisitions.

### RETAIN KEY TABLEAU FORENSIC BRIDGING TRAITS

Each Tableau pocket bridge retains features that are trademarks of all Tableau forensic bridges. Firewire 800 is used for high speed host connectivity. Each device supports HPA / DCO detection. Firmware upgrades are available for support and feature upgrades.

### START YOUR FORENSIC KIT WITH T14 CAPABILITY

Measuring approximately 6 cm (W) x 3.5 cm (H) x 2.3 cm (D), Tableau's T14 and T14-RW forensic bridges are the smallest Firewire 800 IDE write blockers on the market today. Each bridge direct connects to a typical 3.5" IDE disk via a 40-pin IDE connection. There are two Firewire 800/400 ports for host connectivity. Three LEDs provide visual status of Power, Write Block, and Device Activity. Power is supplied through a 4 pin "floppy" style connector. DIP switch settings, accessible via a knock-out panel, provide field-switchable O/S support.

	IDE	SATA
T14	✓	
T14-RW	✓	
T15		✓
T15-RW		✓

### COMPLETE YOUR KIT WITH A T15 BRIDGE

The T15 provides advanced bridging capabilities for SATA subject disks while maintaining the same dimensional profile as the T14. Firewire 800/400 host connection support is standard as are Power, Write Block, and Device Activity status LEDs. A knock-out panel provides access to field-switchable O/S settings.

As an added feature, the T15 can power the subject SATA disk directly if the SATA disk implements the 15-pin SATA power connector.

### FACTORY CONFIGURED READ / WRITE MODELS

At the request of forensic examiners, the T14-RW and T15-RW models are available factory configured for read / write capability. The yellow case identifies each model as a writable device, helping to eliminate acquisition processing errors.
