

## Mediaeraser Degausser MD-103

The Mediaeraser MD103 Degausser is the first and only device of this type designed and produced in the EU. It enables fast, easy and accurate data erasure from digital storage media.

Degausser as a hardware differs in operation from the data erasure software. Degausser accumulates electric energy, transforms it to the electromagnetic impulse and applies it to the inserted storage media.

The Mediaeraser MD103 Degausser is the first and only device of this type designed and produced in the EU. It enables fast, easy and accurate data erasure from digital storage media.

Degausser as a hardware differs in operation from the data erasure software. Degausser accumulates electric energy, transforms it to the electromagnetic impulse and applies it to the inserted storage media.

After the erasure process by means of Degausser the storage device is not usable anymore and may be recycled according to the Waste Electrical and Electronic Equipment Directive No. 2002/96/WE. What is more, the information previously stored on the device will vanish irreversibly. No one – even the most advanced data recovery laboratories – will be able to recover any information from such media.

#### Technical specification:

- Power supply: 230V AC 50/60 Hz
- Fuse: 230V/50Hz; 2,5 A
- Size: 449 x 305 x 132,5 mm (excluding handles)
- Weight: 10kg
- Box size: 569 x 465 x 133mm
- Processing time: 40sec per one device
- Types of storage devices: HDD 2.5", 3.5"; DLT, LTO, 3490 tapes, and others
- Maximum device size: 170 x 130 x 35mm
- Generated magnetic field: 9000 Gauss
- Ambient Humidity: 10 – 40% without condensation
- Operational temperature: 5-40 Celsius degrees
- Demagnetization system: capacity discharge system
- Warranty: 2 years
- CE Marking: Yes

If You want to order the Degausser Mediaeraser MD103 please contact us:
